Hi Brenda. I am more than happy to come to your home or meet you somewhere to help you participate. In regards to your questions, I will attempt to explain or answer each.

Natural gas sector does not have a lot to it in terms of options, so I can understand some confusion on where to start.

The categories were consolidated so that it flowed a bit better at the workshop.

We can certainly develop codes for siting to make deployment of EV more effective. But it may be difficult to dictate the type installed.

The state and regional governments are trying to develop new ways to shift auto dependency. A good example is the icommute program. There are others, but this is clearly an area that should be continuously evaluated and strengthened as necessary.

Statistics for electric meters and off-grid measures will be accounted for. We process about 15 solar permits every week. So we will need to monitor and get credit for it.

Hi again Mike,
Since I was unable to attend the July 30 public info session, I have read the online CAP materials and did attend your Aug 28 presentation to the Planning Commission. My husband and I sat down to fill out separate Passport Questionnaires, only to discover that we have additional questions:

First, on the Passport, are we to use the measures from Station 5 to complete the Passport? If so, on Passport question #5, the "Natural gas consumed or burned" measures do not seem clearly delineated in the Station 5 "Building Energy" grid, although it is generally used with current hot water heaters, etc. This topic is important to me. Also, my husband, a bit of an efficiency nut in regards to his time as well, declared he would not be completing it due to frustration over apparent lack of correlation between materials, which does have me wondering if I am using the correct chart, or if we are to write in our own suggestions.

Second, Commissioner Roma, I believe, asked about pumped hydro-electric storage with Henshaw-Wolford, I think it was. I understand Hodges-Olivenhain uses this, would want more info on this.
Third, regarding EV charging stations. I have read that GM plans a rollout of new e-models 2023, with XFC charging stations faster than Tesla's, at 180 miles range in 10 minutes charging time. Understanding that many early generation cars won't be able to use these chargers, many of us e-vehicle lease holders have been waiting for this. Should we mandate employers to include slower chargers in their employee parking, have preferred parking spots for charging vehicles near prime destinations while we wait for faster chargers? Can we influence the location of one of these faster chargers?

Fourth, it's unclear to me in the "Things That The City is Already Doing" category whether the city chose to convert the city fleet to biodiesel or to electric. If this is yet undetermined, can the public have a voice in this?

Fifth, I have read California will be getting millions from the Volkswagen settlement. Is the state planning to provide cities with some of these funds directly? Are there other ways to get our community involved in the state's use of these funds? Along these lines, you mentioned an incentive program for cities without a CAP to create one; are there people in our planning process looking for grants/awards/partnerships? Maybe, as in the college scholarship process, some awards are overlooked.

Sixth, the statistics used for our charts seem outdated in some areas. My neighborhood has changed significantly in 2016-2018, with much more rooftop solar.

Seventh, SB100 changes things a bit.

Mike, your work on this project is much appreciated.

Sincerely,

Brenda Koenig

Hi Patricia, no date has been set yet but I expect November.

I am interested in coordinating a meeting still with your group to go over phase 1 outreach.

Hi Marian,

Not sure if I responded to this email, but I would like to do so now.

We will be transmitting workshop results (from the first phase) to the Planning Commission this Tuesday, and then to the City Council this Wednesday.

We will be looking to receive confirmation of the results, prior to developing the second phase of outreach. Consequently, I am guessing that the second phase of outreach will occur in early 2019.

Hi Laura,

Public correspondences received from July 4 to August 20 are included in the 8.28 PC staff report as an attachment.

(The above link includes a couple of your correspondences.)
Public correspondences received from March 21 to July 3, 2018 are included in the 7.10 PC staff report as an attachment.

(The above link includes correspondences from CAC, ECA, and SC.)

At some point I will move everything out into a separate file that can be downloaded/viewed. It would make sense to do so to ensure that public correspondences received along the way incorporate the input into the draft plan.

Thank you.

Subject: Re: City of Escondido - CAP Newsletter No. 4

Mike,

Thanks for a copy of the newsletter. Now that you will have a new Mayor and a city council with more folks who actually care about climate change and the environment maybe you can finish all the “planning” and actually start doing something. Put solar panels on city buildings, plant trees instead of always cutting them down, fix the totally out of sync traffic signals etc.

I know from good authority that mayor Sam was bought and paid for by developers but with him and Gallo gone maybe you guys on staff can actually start doing something to protect our environment.

Escondido, CA 92025

RE: Sierra Club North County Group Recommendations for Escondido Climate Action Plan Update.

Dear Mayor, Councilmembers, Mayor-Elect, and Councilmember-Elect:

The Sierra Club North County Group (NCG) understands you will be receiving an update and providing direction to the staff regarding the Escondido Climate Action Plan (E-CAP) on Wednesday. This hearing date is merely two weeks before a new city council with new leadership is seated.

Our first request is that this issue be delayed to a time after the new Mayor and Council are installed.

As the outlook becomes more dire, the need for assertive action, at every level, is ever more imperative. Not only the Intergovernmental Panel on Climate Change¹, but even the Trump Administration released a report² which reveals what our nation will suffer if we do not act soon and aggressively. The 1600-page National Climate Assessment report—produced by 13 federal agencies and 300 scientists, at the request of Congress, confirms that climate change is “affecting every sector.” It will be important for the E-CAP process to review and consider the realities contained in this report.³

What the staff is stating as “confirmation of results” from the public process is unclear. Since many issues, important to our membership, are not included in the staff analysis, we will restate them here.

NCG requested requirements of the Climate Action Plan

1. First and foremost, the NCG strongly urges Escondido to follow San Diego, Chula Vista, and Del Mar in adopting a **100% clean energy goal for the city**. Such a goal is not pie-in-the-sky (if it ever was) any more. The technology is available, the economics are sound—all that is needed is the political will.

³ https://nca2018.globalchange.gov/
2. The E-CAP should include an analysis of a **Community Choice Energy program**. This kind of initiative could reduce emissions, lower costs, provide cleaner energy, and generate revenue for the city. As leaders of the city, there is no credible reason not to fully study this issue and have the benefit of current data and conditions. Solana Beach has recently created their own community choice energy program⁴ and San Diego has announced their intention to.

3. The E-CAP must be **enforceable and effective**.

4. The E-CAP should include a section and specific actions to address **environmental justice and social equity**.

5. The E-CAP should have clear and aggressive **energy and water use reduction and efficiency goals** with strong implementing ordinances.

6. The E-CAP should include **visionary transportation actions** to reduce vehicle miles traveled, municipal conversion to clean vehicles and **clear, implementable plans to shift commuter modes of travel** in concert with those of San Marcos, San Diego, Del Mar, Carlsbad and National City. E-CAP should build on the city’s commitment to implement an **updated bike plan**.

7. The city’s commitment to actionable smart growth strategies and a robust complete streets program such as San Diego, San Marcos, and Vista have adopted should be part of the E-CAP.

8. The E-CAP should include a commitment and timeline to **achieve zero waste** such as included in the San Diego and Del Mar CAPs.

9. The E-CAP should develop aggressive **tree canopy goals and canopy retention commitments to reduce heat islands** especially in neighborhoods that struggle with cooling infrastructure.

10. The E-CAP should **extend GHG targets to at least 2030**, and preferably, to 2050 given the speed at which our climate is warming.

11. The E-CAP should prioritize all electric building for new construction.

12. The E-CAP should include education priorities for the city that will help build a **culture of climate protection** among residents.

**Escondido could lead the way in addressing Social Equity in CAP Implementation**

One important, but not well understood, issue is how CAP implementation could address social injustices, build equity, and prevent future injustice. Equitable CAP Implementation would address patterns of underinvestment, address existing community impacts, and proactively plan for long-term health and quality of life. Director of the Program for Environmental and Regional Equity at USC, Dr. Manuel Pastor and other researchers have defined three dimensions of equitable policy implementation. We have based our comments below with heavy reliance on this guidance.⁵

- To address deficiencies in the past, addressing social equity in the CAP would prioritize investments that will close racialized gaps, especially by wealth, environmental burden, and existing amenities in a way that will improve work and economic and health opportunities for underinvested communities. **In the E-CAP, this could mean that the**

---

CAP focus efficiency and solar programs in neighborhoods that are traditionally left out of redevelopment and improvement. An E-CAP might direct first and most resources (solar, energy and water efficiency, tree canopy, walking and biking trails, etc...) in areas of the city designated in the State’s CalEnviroScreen as overly burdened with pollution or as disadvantaged or where housing stock has not been upgraded.

- To ensure that inequities are not worsened, the CAP should involve partnership throughout the process that is inclusive of the perspectives of vulnerable communities, that supports authentic community-based participation and power, and results in shared decision-making, while also strengthening the health and well-being of the entire region. In the E-CAP, this could mean workshops and involvement in impacted areas that traditionally have no cooling systems in homes, which help residents improve tree cover, energy efficiency, and establishing cooling centers close to these neighborhoods.

- For future planning, equity would require that government takes into account the future by leveraging funding for long-term community health and organizational capacity, avoid or mitigate future harm that may result for new investments in a place, and incorporates metrics and evaluation to promote adaptable and effective implementation. In the E-CAP, this could mean increasing parks and green space in park deficient areas, target efficiency and solar programs in impacted areas, and even re-considering the location of the water treatment plant and move to a less impacted neighborhood, further from any residents. It would also mean ending annexations and project that propose development in high-risk areas that will draw considerable community financial resources away from existing areas needing investment in infrastructure and other needs.

A. Climate Adaptation Plan

Because, as a society, we did not act sooner, we are now experiencing the negative impacts of a warming climate. More extraordinary fires, floods and drought can be expected in the future, exacerbated by poor urban planning. The E-CAP should also include adaptation planning. At a minimum, significant work must be done in these areas:

1. Analysis and action plans to preserve critical infrastructure and land uses.
2. Cessation of building new development in fire and flood prone areas.
3. Establishment of cooling centers for residents in at-risk areas and a plan to inform the public about their availability.

As with the E-CAP, the adaptation plan should be done through a public process.

A Caution

We repeat our caution related to following the wrong direction of the County on out-of-region mitigation or failure to adopt an enforceable CAP. The County has been sued and lost on both of these fronts. We will repeat the comments of Josh Chatten, our attorney for the case who stated it well, “…the County essentially allows unbridled development in far-flung areas provided that
developers purchase carbon offsets from anywhere in the world. Such offsets may be completely illusory and would not benefit the residents of San Diego as offsets attained through local projects would."

We did not support out-of-region mitigations for the County and we will not support it in the city of Escondido.

We hope Escondido does not make the same errors as the County.

Please understand, we are at a crossroads in our region and if we fail to address this issue now, we will not get another chance. The stakes could not be higher for our future.

In closing, when it comes to climate action there are two distinct camps emerging in our county. One group includes the County of San Diego that continually fails to adopt an adequate plan and continually finds itself losing in court.

The other group is poised to lead the nation on this issue. The Navy and Marines based in San Diego have taken serious action on climate issues since 1990. The city of San Diego adopted the 'gold standard' of a Climate Plan and recently committed to 100% clean energy. Other cities are following suit.

We urge the City of Escondido to join the latter club.

We look forward to working with our future city leaders and your staff to develop a Climate Action and Adaptation Plan worthy of our city, our region, and our world.

Sincerely,

Laura Hunter, Conservation Chair
Sierra Club North County Group

cc. Escondido Planning Commission
Mr. Jeff Epp, City Manager
Mr. Mike Strong, Project Director
Thanks for the update.
I wanted to point out that we do not seem to have synchronized traffic lights on Centre city parkway as had been stated before. If they are synchronized some time, it would be helpful to have signs of the synchronized speed posted.
Thanks,
Brian Shuck.

OK, it looks like me, Chris Nava, Marian Sedio, Vanessa Valenzuela will be there. George Courser, Conservation Chair of the Sierra Club is also willing to come if you want to be briefed on the status of the Club’s lawsuits on climate plans etc. LMK if that would be of interest or not. He is more in the details of those than I am, but, of course, we now have a chance to do great plan that won’t get litigated ☺️ See you Monday.
