Storm Water Basics

A **watershed** is an area of land that drains to a common point. For example, in the Escondido Creek Watershed, a drop of water that falls near Lake Wohlford can trickle down the hills into Escondido Creek and eventually to the ocean via the San Elijo Lagoon in Encinitas.

Storm drains are pipe and channel systems that prevent flooding of our streets by channeling storm water directly to our creeks and lakes. Anything that flows into the storm drains ends up in our water ways untreated.

Only Rain in the Storm Drain!
